

3M™ Versaflo™ TR-300+ Powered Air Respirator

To maintain protection levels, optimise the effective lifetime of the system and avoid the additional cost of replacement, it is extremely important to carry out regular checks and maintenance.

► Before Use

- Use indicator button to confirm battery charge.
- Ensure correct filter is fitted.
- If spark arrestor and/or pre-filter are used ensure they are clean.
- Use air-flow indicator to confirm correct flow rate. If ball is below the line at first it may rise further – allow up to 90 seconds for the flow to stabilise. Change filter if ball does not stabilise above the line.
- Visually inspect for damage.

► Monthly

- Carry out all the 'Before Use' inspections and create record of this monthly check.

► After Use

- Clean with cloth dampened with a mild solution of water and liquid household soap.
- Disinfect with 3M 105 Wipes.
- Store in a dry, clean area / locker away from direct sunlight, high temperatures and solvents.
